

NexaCore Sales Playbook

Version 4.1 | Enterprise Sales Execution

Owner: Revenue Operations Effective: 01 Aug 2026 Review: 31 Jul 2027

1. Sales Operating Model

This playbook defines NexaCore's synthetic enterprise sales process, qualification standards, forecasting practices and account-management controls. It is designed as private company data for RAG evaluation and is not sourced from a real company.

1.1 FY26 commercial snapshot

Metric	FY26 value	Definition
Qualified pipeline	INR 184.6 crore	Open opportunities at qualified stages
Closed-won bookings	INR 71.8 crore	Signed bookings recognized by Sales Ops
Win rate	31.4%	Won opportunities / closed opportunities
Average enterprise deal	INR 42.6 lakh	Median segment varies by region
Sales cycle	74 days	Qualified opportunity to close
Renewal rate	88.2%	Renewed eligible contracts
Net revenue retention	113%	Existing customer cohort

1.2 Sales stages

- Prospect: account identified and basic fit established.
- Discovery: business problem, stakeholders, budget context and timeline documented.
- Qualified: MEDDIC-style qualification meets minimum evidence.
- Proposal: commercial proposal issued with approved pricing.
- Negotiation: commercial/legal terms actively negotiated.
- Closed Won/Lost: contract outcome recorded with reason code.

2. Qualification and Discovery

2.1 Qualification minimums

Field	Required evidence
Business problem	Documented problem and business impact
Economic buyer	Named or explicitly unknown with plan to identify
Decision process	Known or active discovery
Budget	Budget range, funding path or commercial qualification
Timeline	Target decision/implementation date
Competition	Known competitor or status quo
Technical fit	Architecture/security requirements identified

2.2 Discovery discipline

- Discovery calls over 45 minutes should have an agenda and named attendees.
- Customer requirements must be recorded in CRM within 1 business day.
- A verbal statement such as 'we love the product' is not treated as qualification evidence.
- Security, procurement and legal requirements should be identified before final proposal where applicable.
- Opportunity stage changes require evidence, not optimism.

2.3 Disqualification

Opportunities should be removed or recycled when there is no identified problem, no plausible decision path, a timeline beyond the planning horizon without a committed next step, or a solution mismatch.

3. Pipeline Management and Forecasting

3.1 Forecast categories

Category	Probability guide	Required evidence
Pipeline	<20%	Early discovery / limited evidence
Best Case	20–49%	Qualified need + active next step
Commit	50–79%	Economic buyer + commercial path + dated next step
Closed	100%	Contract/signature or approved booking evidence

3.2 Forecast rules

- Commit deals must have a dated customer next step inside the current forecast period.
- Sales managers review pipeline coverage weekly.
- A forecast change above INR 25 lakh should have a documented reason.
- Opportunities without activity for 21 days are flagged as stale.
- Quarter-end deals require explicit legal/procurement status before entering Commit.

3.3 Pipeline coverage

Reference coverage target is 3.0× quarterly quota for enterprise teams and 2.5× for mature account books. Coverage is evaluated against qualified pipeline rather than unqualified lead volume.

4. Enterprise Sales Motion

4.1 Standard sequence

- Account research and stakeholder mapping.
- Discovery and qualification.
- Solution workshop / technical validation.
- Security and architecture review where applicable.
- Business case and commercial proposal.
- Procurement and legal negotiation.
- Executive alignment.
- Signature, handoff and implementation kickoff.

4.2 Proof of value

Proof-of-value engagements should define success criteria before technical work starts. The standard duration is 14–30 calendar days. Extensions beyond 30 days require Sales Engineering and the account executive to document why the extension is commercially justified.

4.3 Handoff to Customer Success

Handoff item	Required timing
Signed contract + commercial terms	Within 1 business day
Implementation scope	Within 3 business days
Success metrics	Before kickoff
Known risks / commitments	Before kickoff
Customer stakeholders	Before kickoff

5. Account Management and Commercial Hygiene

5.1 Account review cadence

- Tier-1 accounts: monthly account review.
- Tier-2 accounts: quarterly business review.
- Expansion opportunities must have a separate opportunity record rather than being hidden inside renewal notes.
- Customer escalations affecting renewal risk must be linked to the account record.
- Discounts must follow the separate Discount Policy.

5.2 Renewal risk signals

Signal	Risk flag
Usage decline >20% over 30 days	High
Executive sponsor lost	High
Renewal date <90 days with no plan	High
Open critical support issue	High
Contract value dispute	Medium
No active user engagement	Medium

5.3 Commercial hygiene

Every open opportunity must have owner, stage, amount, close date, next step, customer, product scope and forecast category. CRM is the system of record; personal spreadsheets do not override CRM.

6. FY26 Sales Metrics and Governance

6.1 Regional performance

Region	Bookings INR Cr	Win Rate	Avg Sales Cycle
South India	18.4	34.8%	68 days
West India	16.1	31.2%	72 days
North India	13.7	28.9%	81 days
International	23.6	30.6%	89 days

6.2 Governance

- Weekly forecast call: deal movement, risk and next steps.
- Monthly pipeline inspection: stage aging, coverage and conversion.
- Quarterly territory review: capacity, whitespace and account concentration.
- Revenue Operations audits CRM completeness monthly.
- Commission eligibility uses approved booking and payout records, not informal sales spreadsheets.
